EXPERIENCE

Openreach (BT) — *Advanced Engineer*

2017 - PRESENT

Operating both independently and in teams to plan, commission, repair, and maintain the Openreach Fiber and Telecoms networks.

I was my department's lead "Brickwall-case" handler, which focused largely on the business and corporate sectors.

I have been fortunate to work on networks for the BBC, Jaguar-LandRover, the Ministry of Defence, the US Air Force, and the estates of a few influential people.

Shell Energy — *Broadband Specialist*

2015 - 2017

I was head-hunted to Shell when a new broadband pilot project I lead started taking off.

My responsibilities included investigating unresolved technical issues, working with stakeholders to resolve long-standing faults, and collaborating with sales teams to help grow the company's new product.

Sitel — *Campaign Supervisor*

2013 - 2015

Assisted sales and technical advisers with queries and training they required. Responsible for day-to-day reports and supervision of the support center. I was selected to spearhead a small Broadband pilot project for one of our largest stakeholders.

Additional employment history available upon request.

CORE COMPETENCIES

- Cloud Engineering
- DevOps
- AWS
- Cloud Migration
- Agile Methodologies
- Continuous Delivery
- Serverless
- Problem-Solving
- Team Collaboration

SKILLS

- Thorough Documentation
